IVM4500 IEM
REFERENCE WIRELESS IN-EAR-MONITORING SYSTEM

The image shows the components of the AKG IVM4500 IEM system. On the left, there are two AKG IP2 in-ear headphones. In the center, there is a black wireless transmitter with two antennas and a yellow display. To the right of the transmitter is a black wireless receiver with a single antenna and a yellow display. The AKG logo and the product name 'IVM4500 IEM' are prominently displayed in the upper right, with the full name 'REFERENCE WIRELESS IN-EAR-MONITORING SYSTEM' below it.

The IP2 high-performance in-ear headphones provide wide-range sound and excellent isolation to suppress high ambient noise levels, on loud stages, for example. This makes the IP2 an ideal tool for in-ear monitoring applications. Thanks to the dynamic driver, it delivers a perfectly contoured bass even at very low frequencies. An integrated sliding cable tie and the soft-rubber sleeves enable the IP2 to adapt to every ear. The IP2 earphones are also included in the AKG professional in-ear monitoring system, the IVM4500.
