

# COMPACT SOUND REINFORCEMENT SPEAKER SYSTEM S3110T

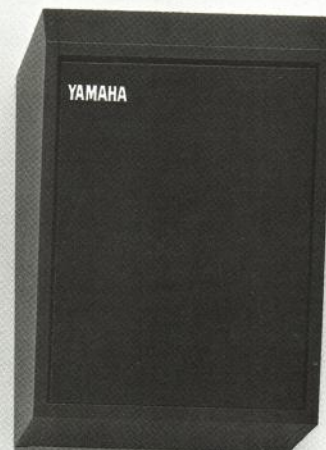

# SMOOTH POWER AND A TIGHT PA SOUND IN A COMPACT SPEAKER SYSTEM

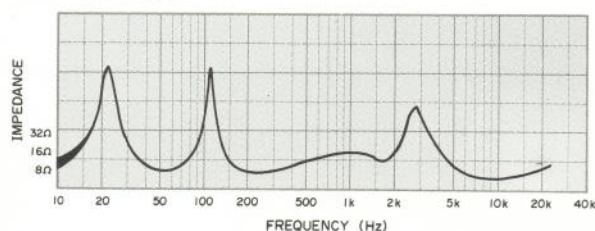

If you're looking for a really compact speaker system that can deliver plenty of power and superb sound in PA, institutional or even personal applications, the Yamaha S3110T is it. This remarkably compact speaker system features a 10" woofer and high-performance horn tweeter in a two-way system configuration—all in a 23-liter bass reflex enclosure. The sound is surprisingly clean and precise for a speaker system of this size, making it ideal for just about any application. Frequency response is virtually flat across most of the audio spectrum, so you know you're getting accurate reproduction. What's more, the S3110T is small and light enough for wall-mounting where space is limited. Whether used on the floor or mounted on a wall, the S3110T has a specially designed sloping panel that maintains optimum directivity.

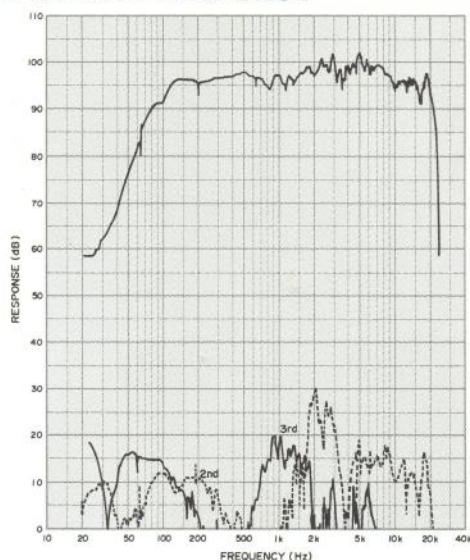

Not only is the S3110T sound fine for PA applications, but it's more than rugged enough to withstand the rigours of continuous operation at maximum power as well as the rough handling that PA equipment is generally subject to. The S3110T looks nice, too, with an elegant vinyl chloride coated plywood finish.
